Return Policy

How do I return an order?

You can easily return your order by following these steps:

If you are logged in:

Go to Profile > Orders & Returns, select your order and follow the return instructions.

Or:

Go to Support > Create Return, select your order and we will guide you through the process.

If you are not logged in:

Open your order confirmation email, click on Order Details and follow the instructions provided there.

After registering your return, you will receive an email with a link to the GLS return platform, where you can find the nearest GLS ParcelShop to drop off your return.

Please note: Returns can only be processed via GLS.

Always contact us first before sending anything back. This allows us to register your return and provide you with a reference code for correct identification by our returns department.

Return address:

Keistraat 3 9620 Zottegem (Belgium)

What are the return conditions?

You have 14 days from delivery to decide whether you want to return a product.

To qualify for a return:

- Items must be unused and in original condition
- All accessories and original packaging must be present
- Items must not be damaged, soiled or modified
- Returns must be registered within 14 days, and goods must be sent back within 14 days thereafter.

We may reduce your refund proportionally if items show signs of use that go beyond what is necessary to inspect them (as you would in a store), or if there is:

- Damage due to improper use
- Missing packaging or accessories
- Visible dirt or wear requiring cleaning or repackaging

Which items are not eligible for return?

You cannot return:

- Items that have been mixed with other substances, such as oils or liquids
- Products that have been damaged by incorrect use or improper use

Who pays the return costs?

The return costs are at your expense. These will not be refunded unless your item is damaged or incorrectly delivered.

When and how do I receive my refund?

You will receive a full refund within 14 days after receipt and inspection of the return.

Refunds:

- Include the original shipping costs (unless a premium shipping option was chosen)
- Will be credited to your original payment method. If this is not possible, we will contact you for alternative account details.

Can I exchange a product?

We do not offer direct exchanges.

Return your item for a refund and place a new order at ottogusto.com.

Detailed definitions of return conditions

1. Liquids and consumables

Definition: This category includes all liquids, oils, greases, chemicals and other consumable products.

Return condition: No returns are accepted if the product packaging has been opened, the seal has been broken, or the product has been used in any way. This is due to the risk of contamination and the inability to verify the integrity of the product.

2. Products that merge with other products

Definition: This category includes products that are mixed with or added to other substances, such as oil additives, fuel treatments and certain sealants.

Return condition: Once these products have been used or applied, they are non-returnable. This is because they have been consumed and cannot be restored to their original state.

3. Electrical and electronic components

Definition: This category includes a wide range of sensitive electronic parts, such as sensors, switches, control modules, ignition components and computer units (ECUs).

Return condition: Due to their sensitive nature, electrical and electronic components are generally non-returnable once the sealed packaging has been opened or the part has been installed. This is to prevent the return of damaged or tampered parts that may appear functional but can fail prematurely.

Specific Non-Returnable Electrical/Electronic Items:

- ABS sensors
- Air temperature sensors
- Blower motor resistors
- Camshaft and crankshaft engine sensors
- Carburetors
- Computers (ECU)
- Coolant temperature sensors

- Distributor caps
- EGR valves
- Fuel injection assemblies
- Fuel pumps
- Ignition coils
- MAP/MAF sensors
- Oxygen sensors
- Throttle body
- TPMS sensors
- Turbochargers
- Variable valve timing components

4. Gaskets and seals

Definition: This category includes all types of gaskets, seals and O-rings.

Return condition: Gaskets and seals are non-returnable once the packaging has been opened. This is because their sealing capability may be compromised once they are exposed to air or mishandled.

5. Special orders and performance parts

Definition: This category includes items that are not regularly in stock and are specifically ordered for a customer, as well as high-performance parts.

Return condition: Special orders and performance parts may be subject to a restocking fee. In some cases, they may be non-returnable. This is clearly communicated at the time of purchase.

6. Installed or used parts

Definition: This category includes any part that has been installed on a vehicle or used in any way.

Return condition: Parts that have been installed, mounted or used are non-returnable. This is because installation can cause wear, damage or contamination that makes the part unsuitable for resale.

7. Customized or modified parts

Definition: This category includes parts that have been customized, modified or altered from their original specifications.

Return condition: Customized or modified parts are non-returnable because they cannot be resold to other customers.

8. Hazardous materials

Definition: This category includes items that are classified as hazardous materials, such as certain chemicals, batteries and aerosols.

Return condition: Hazardous materials may have special return restrictions due to shipping and handling regulations. Some may be non-returnable.

9. Brake components (Safety-critical)

Definition: This category includes brake pads, brake shoes, brake discs and other safety-critical brake components.

Return condition: Once installed or if the packaging has been opened and the part has been exposed to contaminants, brake components are non-returnable due to safety concerns.

10. Filters (Used or contaminated)

Definition: This category includes air filters, oil filters, fuel filters and cabin filters.

Return condition: Filters that have been installed or exposed to contaminants are non-returnable. New, unopened filters in original packaging can be returned within the standard return window.

11. Timing chains and belts

Definition: This category includes timing chains, timing belts and related components.

Return condition: Due to the critical nature of these components and the potential for damage during handling, timing chains and belts may be non-returnable once the packaging has been opened.

12. Diagnostic tools and equipment

Definition: This category includes diagnostic scanners, code readers and other electronic diagnostic equipment.

Return condition: Diagnostic tools can be returned within the standard return window if they are in new, unused condition with all original accessories and packaging. Software-based tools may have different return policies.

13. Warranty and defective items

Definition: This category covers items that are defective or fail within the warranty period.

Return condition: Defective items can be exchanged or refunded regardless of the standard return conditions, provided the defect is not due to misuse, incorrect installation or normal wear and tear.

Vehicle compatibility verification

VIN verification: Customers are strongly encouraged to provide their Vehicle Identification Number (VIN) to ensure correct fit. Returns due to incorrect fit may be subject to return shipping costs if the customer has not provided VIN information.

Fraud prevention

Return tracking: All returns are tracked and monitored to prevent fraudulent activity. Customers may be asked to provide valid photo identification for returns.

Customer service flexibility

Case-by-case basis: While these definitions provide clear guidelines, customer service representatives may have the discretion to make exceptions on a case-by-case basis, especially for loyal customers or in cases where the company was at fault.
